

SB STOCKS

Roles and Responsibilities (Extended)

1. User (Trader)

- Register and create an account.
- Login securely and access trading dashboard.
- Create and manage multiple virtual portfolios.
- Track transactions, monitor stock performance, and analyze portfolio growth.
- Use real-time and historical stock data to practice strategies.

2. System (SB Stocks Platform)

- Provide real-time stock prices and historical market data.
- Ensure secure registration, login, and user data handling.
- Record and manage all transactions linked to users and stocks.
- Maintain consistency and accuracy in portfolio updates.
- Deliver a smooth, fast, and user-friendly interface.

3. Admin

- Manage overall application performance and security.
- Monitor user activity and transactions for fairness.
- Update and maintain stock listings and market data sources.
- Handle technical issues, bugs, and data accuracy.
- Ensure compliance with trading simulation standards.

4. Guest (Unregistered User)

- Browse the platform's landing page to understand core features and benefits.
- View general, delayed, or high-level market trends available to the public.
- Access the registration portal to create a new trader account.

5. Developer / Technical Team

- Develop and maintain the frontend interface (React.js) and backend logic (Node.js/Express).
- Ensure secure data storage and retrieval using MongoDB.
- Deploy continuous updates, manage version control via GitHub, and fix reported bugs.

6. Mentor / Evaluator

- Review the project's live demo and GitHub repository links.
- Evaluate the implementation of core paper trading features and system architecture.
- Provide constructive feedback on UI/UX design, code quality, and overall project completion.
