

USER FLOW

Description

The SB Stocks User Flow illustrates the complete journey of a user through the application, from accessing the platform to securely logging out. It demonstrates how users authenticate, explore stocks, manage portfolios, monitor investments, receive notifications, and update dashboard statistics through an intuitive workflow.

1. Landing Page

The user enters the SB Stocks web application through the landing page, where they are presented with options to Register or Login.

2. User Authentication

New User: Register and create an account before logging in.

Existing User: Login using valid credentials authenticated through JWT (JSON Web Token). After successful authentication, the user is redirected to the Dashboard/Home.

3. Dashboard (Main Hub)

The dashboard provides an overview of investments, portfolio summary, watchlist updates, notifications, and quick access to Stocks, Portfolio, Watchlist, Leaderboard, and Profile.

4. Stocks & Market Exploration

Users can browse and search available stocks, view detailed company information, price charts, and analyze market performance before investing.

5. Buy / Sell Stocks

Users can buy stocks by selecting the desired quantity or sell stocks from their holdings. After confirmation, transactions are processed instantly and the portfolio is updated.

6. Portfolio Management

Displays current holdings, investment value, profit/loss, and portfolio performance. Every transaction automatically updates portfolio statistics.

7. Watchlist Management

Users can add or remove stocks from their watchlist, with updates reflected immediately.

8. Leaderboard

Displays user rankings and investment performance, refreshed automatically based on trading activity.

9. Notifications

The system generates real-time notifications for successful stock purchases, sales, and watchlist updates.

10. Dashboard Statistics Update

After each completed transaction or watchlist modification, the dashboard recalculates portfolio value, holdings, gains/losses, and other investment metrics.

11. Logout

Users can securely log out, ending the authenticated session and returning to the landing page.

Advantages of This User Flow

- Easy Navigation
- Secure JWT Authentication
- Real-Time Portfolio Updates
- Efficient Investment Tracking
- Better User Experience
- Scalable Workflow
